City Beach. Oct 14.

These specimens were collected along the direct road from Perth city to City Beach, exactly 1 mile from the shore.

3 flies
5 Acrididae (1 pair Cedarinia in cop.)

- Calcareous sandy ridge with an open eucalypt cover (almost wholly Tuart) and a rather thick understratum of sclerophyll. shrubs up to 3' high (mostly a prickly Acacia). "Meso-stratum" of Banksia. A few Scaevola almost all of which had nymphs of the furry new genus.

Kewdale Oct 15

a Perth suburb

4 Tetrigids.
5 Acridids.

Tetrigids found on fairly bare sand on edge of a swamp. The Acridids were collected in the long reedy vegetation right on the swamp edge.

---

5 mi. WNW. Walebing. Oct 16.

3 Aust. cruciata

Collected in sparse drying-off grass on a creek bank. Density very light, few nymphs. Rest of field still green and pasture fairly dense; no acridids.
